

Enzymatic Method to Remove 3-MCPD Esters from Vegetable Oils

U.T. Bornscheuer, M. Hesseler, Institute of Biochemistry, Greifswald University
Greifswald, Germany

3-Monochloro-1,2-propanediol (3-MCPD) was discovered as contaminant in edible oils and due to its toxicity should be removed. In this contribution, we will present an enzymatic method to convert 3-MCPD into a non-toxic product.
